Exercise 1

Check out the tools available in this module and then try to:

- Create a 360° photo with the H5P tool - add text and interactive elements.
- Share your work by generating a QR code.
- Create an audio guide on izi.travel and generate a QR code to share it.
- Now, try to create a guided visit modelled on your tools. How will you use the technologies used in this exercise? How can they be used in touristic experiences? Will they be the central elements of your tour, or will they be additional elements/attractions? Share your creations on social media using the hashtag **#diothercity**

Exercise 2

- Read the tutorial on how to create an account on Spotify and the platform where you will create the podcast, and then create these accounts. Next, create one podcast of your choosing and upload it on Spotify.
- Generate a QR code that contains a link to a podcast that you created.
- Share the QR code on your social media, or any other way you like. Share your thoughts on the module and, if you want to, encourage more people to visit the project website and social media. Remember to put **#DiOtherCity** in your post 😊
- If you feel that you're up for a more challenging task, try to create some elements of Augmented Reality on the platform that we recommend in our toolbox. Share your work with others on social media!
